

Audi Q7 park assist

The park assist system, which practically automatically steers the new Q7 in parallel and perpendicular parking and pulls out of parallel parking spots by means of twelve ultrasonic sensors. The package also includes the 360 degree cameras. They display different views of the car's immediate surroundings on the MMI monitor, including a virtual bird's eye view and 180-degree images of the front and rear. Such views are very helpful with confusingly arranged exits, and in combination with the cross-traffic assist rear.
