
Audi A1 Sportback – Infotainment/ Connectivity and LED-headlights

The Infotainment concept in the new A1 Sportback comes from the full-size class. The MMI radio comes as standard - it can be operated via the multifunction buttons on the steering wheel and the display in the fully digital instrument cluster.

Fully connected and always up to date: Infotainment and Audi connect

In the top configuration, MMI navigation plus offers a 10.1-inch MMI touchscreen, which blends seamlessly into the black glass look area.

In conjunction with Audi connect, MMI navigation plus offers A1 Sportback drivers functions such as hybrid route guidance – this calculates the route in the cloud, taking into account the entire traffic situation. The Audi smartphone interface ensures you are always well connected on board the new A1 Sportback. It integrates iOS and Android smartphones using Apple CarPlay and Android Auto into an environment in the MMI programmed specifically for them, and offers two USB interfaces.
