Audi Q2 – Lighting technology

Even in the standard version, the revised Q2 illuminates the road with LED headlights, and Audi will install the new Matrix LED headlights upon request.

One shared module houses seven individual LEDs. The intelligently controlled high beam light always illuminates the road as brightly as possible without blinding other road users. Ten further light-emitting diodes installed behind rhomboid optical components generate the daytime running light. Seven LEDs generate the dynamic turn signals independently.

For the rear lights, Audi offers a version with LED technology. If the Matrix LED headlights are on board, the dynamic turn signal is also included. When the car is locked and unlocked, dynamic light sequencing plays in the headlights and rear lights.
