Audi A1 citycarver – Amazon Alexa and driver assistance systems

The assist systems, which include adaptive cruise control and park assist, are taken from the full-size class. Audi pre sense front (pedestrian and cyclist detection) and lane departure warning are standard.

At the center of the digital world: infotainment and Audi connect

Attractive infotainment components and extensive connectivity make the Audi A1 citycarver a clever companion for young drivers in particular.

A fully digital instrument cluster comes standard, with the Audi virtual cockpit and MMI navigation plus topping the range. Drivers control the top-of-the-line infotainment system via the 10.1-inch touch display or simply via voice control. Navigation destinations are found quickly via free text search. Maps and navigation service provider HERE computes the route online with consideration of traffic conditions in a wide area.

Audi offers additional functions, such as navigation with Google Earth, traffic information online, parking information, hybrid radio and a Wi-Fi hotspot for mobile devices with Audi connect navigation & infotainment, which is included in MMI navigation plus, and the supplemental plus package. The Audi phone box perfectly integrates the smartphone into the car. The Bang & Olufsen 3D Premium Sound System packs 560 watts of power.
The suspension of the most progressive Audi A1 is harmonious and precise. The A1 citycarver is even nimbler thanks to the optional Dynamic package. It includes brake disks with sporty red calipers, the Audi drive select dynamic handling system, a sound actuator and a suspension with adjustable dampers. Audi drive select, which offers four modes – auto, dynamic, efficiency and individual – is also available separately. Audi also offers wheels up to 18 inches in diameter with the dynamic package.
