Audi Q3 SUV – Digital matrix LED functions with micro LED technology

Digital companion for every day: driving assistance and lighting technology from the full-size class plus innovative operating concept for even more comfort

A high degree of personalization and adaptive, high-resolution light functions are made possible with the new micro-LED technology in the digital Matrix LED headlights.

At the front of the Audi Q3, digital Matrix LED headlights feature the micro-LED module used for the first time in this model. The use of this micro-LED technology improves illumination significantly and thus ensures a strong contrast on the road. The light guidance functions are now much more closely linked to the driver assistance functions. The digital daytime running lights with LED technology, consisting of 23 segments per side, create distinctive light signatures that make the vehicle easily recognizable on the road.
